Quality Policy Statement

Policy Statement

Boston Energy is a leading service provider in wind energy, supporting major wind turbine manufacturers and developers with building, installing and maintaining their wind turbines.

We are at the forefront of the industry, supplying highly qualified and experienced professionals throughout the turbine lifecycle.

To achieve this, we have developed a quality strategy and objectives that are agreed by senior management and are reviewed periodically through our regular management reviews.

We have maintained ISO 9001 Quality Management System certification since 2003 and manage the requirements as part of our Integrated Management System (IMS). Through our IMS, we continually seek to improve the effectiveness of our quality management system by monitoring performance, managing risks and opportunities, and ensuring our processes consistently meet customer, statutory, and regulatory requirements.

All relevant quality-related legislation, standards, and other compliance obligations are documented within our Legal and Compliance Register and are monitored and updated as required.

Boston Energy will commit the necessary resources and provide relevant training to ensure the operational effectiveness of the IMS.

This Policy Statement will be reviewed on an annual basis or sooner if the needs arise. It will be communicated throughout the organisation and a copy published on our website.
